Ayopa Module

Installation

Clear the store cache under var/cache and all cookies for your store domain. Disable compilation for Magento 1.4+. This step eliminates almost all potential problems. It's necessary since Magento uses cache heavily.

Backup Your Data
Backup your store database and web directory.

Download and Extract
Download and unzip extension contents on your computer and navigate inside the extracted folder.

Step 1 - Upload Files
Navigate inside *step_1* directory. Using your FTP client upload content of *step_1* directory to your store root. This will not overwrite your app directory, it will add the new files to this directory.

Edit shipping_method.phtml Template File
In your web directory, check your theme for /app/design/frontend/*yourtheme*/template/checkout/onepage/shipping_method.phtml. If this file does not exist in your theme, navigate to app/design/frontend/base/template/checkout/onepage.

Edit shipping_method.phtml as indicated:

Change this code:
<button type="button" class="button" onclick="==shippingMethod.save();==">

To this:
<button type="button" class="button" onclick="==ayopaSubmit();==">

Edit text.phtml Template File
In your web directory, check your theme for /app/design/frontend/*yourtheme*/template/catalog/product/view/options/type/text.phtml. If this file does not exist, navigate to app/design/frontend/base/template/catalog/product/view/options/type.

Edit text.phtml as indicated:

Change this code:

```
<dt><label<?php if ($_option->getIsRequire()) echo ' class="required"' ?>><?php if
($_option->getIsRequire()) echo '<em>*</em>' ?><?php echo  $this-
>htmlEscape($_option->getTitle()) ?></label>
    <?php echo $this->getFormatedPrice() ?></dt>
```

To this:

```
<?php if ($_option->getTitle() != 'Ayopa'): ?>
<dt><label<?php if ($_option->getIsRequire()) echo ' class="required"' ?>><?php if
($_option->getIsRequire()) echo '<em>*</em>' ?><?php echo  $this-
>htmlEscape($_option->getTitle()) ?></label>
    <?php echo $this->getFormatedPrice() ?></dt>
<?php endif; ?>
```

This will hide the Ayopa label in the Custom Options display.

Step 2 – Upload or Modify local.xml File
Navigate inside *step_2* directory in the extracted module file. If you use a different from default theme - be sure to rename step_2/app/design/frontend/default/default folder to your store's values. If you already have a local.xml file in your /app/desing/frontend/default/default folder, copy the contents of local.xml between the <layout> tags of the module to your local.xml file and save the file to your store. Otherwise, use your FTP client upload content of *step_2* directory to your store root.

Configuration

Enter Ayopa Credentials

In the admin, go to System → Configuration. Under Ayopa Settings, click Configuration. Enter your Ayopa username (email) and password. Save Config.

Create GroupBuy for Product

In the admin, go to Catalog → Manage Products → Edit a product → Ayopa. Click the New Auction button. Enter the auction information. Click Save Auction.
